## Lithium-Ion battery pack charging instructions

Lithium-Ion batteries are self-discharging like all other rechargeable batteries. A fully charged battery will be completely discharged after a few months.

These batteries should never be stored discharged! Deep discharging can damage the internal cells, if it happens the mandatory protective circuit prevents any recharging of the unit.

Therefore a frequent recharging of the Lithium-Ion battery pack is necessary. If not in use it should be recharged after 6 months to full level.

Due to safety reasons the battery of the reader ID ISC.PRH200 is delivered almost empty. Therefore, it must be fully charged immediately after receiving and before use.

A new battery needs at least two or three charging and discharging cycles to reach full capacity.

Remember:

**Recharge your battery at least every 6 months!**
